Touchcode® Keyless Entry

Three Ways Versatile

1 Versatile in Operation

Your Touchcode lock is programmed to accommodate three different employee codes. It even has an Executive code which provides Master Key capability. It's a simple matter to invalidate or revalidate any of the three group codes...or to change any of the three group code combinations. All programming operations take just a few seconds, because they're done on the keypad, not by disassembling the lock. And with a million possible combinations, Touchcode provides outstanding security!

2 Versatile in Appearance Options

All Touchcode locks are available in the eight most popular architectural finishes, and with five different knob designs. In addition, the mortise lock version of Touchcode is available with six lever-handle styles. You can match or complement the existing hardware on virtually any commercial building.

3 Versatile in Application

Touchcode is available in cylindrical and mortise lock versions, with or without mechanical key override for additional convenience...or emergency access. For highest security requirements, Touchcode's mortise lock is also available with a 1" deadbolt.

For all Touchcode's versatility, it is easy to install. In cylindrical lock projects, just remove the old lock, drill three holes, attach a mounting plate and install the escutcheons and knobs. Mortise locks require virtually no additional door preparation.

We'd like to tell you more about the remarkable—and surprisingly economical—Touchcode lock. Call or write today.

Ohm's Law

An electrical circuit with voltage (E) appearing across a resistance (R), means current (I) flows through the resistance as shown by the formula:

$$I = E \div R$$

From this basic formula you also can determine voltage (E) and resistance (R) by simple mathematical calculations with the following formulas:

$$E = I \times R$$

and

$$R = E \div I$$

WITH ITS HIGH CAPACITY AND MULTIPLE FORMATS, THE 9000 RECEIVER/PRINTER CAN MEET YOUR NEEDS FAR INTO THE FUTURE.

Here's an investment in tomorrow that's equally valuable today. The Silent Knight 9000 Digital Receiver/Printer has an almost limitless system capacity. So it's unlikely to ever become obsolete. And since it receives SIA and other major formats, you won't have to add equipment to operate it immediately.

Remarkably designed, the 9000 can instantly increase the efficiency of your monitoring system:

- The 9000's phone capacity expands to as many as 12 phone lines.
- Each of its line-cards can handle more than one format simultaneously, which reduces phone costs.
- Its 100-call memory provides accuracy and helps prevent missed signals.
- A built-in computer interface has three output ports for: com-

puter, parallel printer and modem.

■ An optional, programmable listen-in feature gives your central station two-way communication with customers.

Really, it isn't surprising that Silent Knight offers such an outstanding product. After all, their name has been synonymous with quality and innovation for more than 20 years.

Send for more information about the Silent Knight 9000 today. The more you learn, the more you'll want it in your future.

For a free brochure, call 1-800-328-0103. In Minnesota, call (612) 566-0510.
